 University of Minnesota, Minneapolis, Minnesota, USA

Theory based approach – 5 classes of intervention
 Classification based approach – 4 classes of intervention.
 Clinical expert based approach - 23 classes of intervention
 Data driven approach- 24 classes of intervention

 Challenge: How to compare and depict the results of the four approaches?

Solution: Flow chart mapping to conceptualize differential intervention effectiveness models for outcomes research
 Surveillance class is identical to the monitoring class
 •Teaching & guidance class is identical to the informing class
 •Clinical expert class maps with comprehensive wound care data driven approach based classes

-  Classification Based Class
-  Theory Based Class
-  Data Driven Class – Basic Wound Care
-  Data Driven Class – Comprehensive Wound Care
-  Clinical Expert Class
